ENSURE REGISTRATION OF EVERY BIRTH AND DEATH

PREFACE

The Civil Registration System (CRS) may be defined as a unified process of continuous, permanent and compulsory recording of the vital events and characteristics thereof, as per legal requirements in the country. In India, the Civil Registration System covers registration of births and deaths. It provides the best source of information on the vital rates at all levels.

2. This issue of the Report on 'Vital Statistics of India based on the Civil Registration System' for the year 2017 provides an overview of the working of the Civil Registration System (CRS) in the country and presents a compilation of data on registered births, deaths, infant deaths and still births with rural-urban & sex-wise break-up and sex ratio at birth based on Civil Registration Records. Ideally, an Annual Report on vital statistics containing more detailed information should have been brought out. However, due to limited availability of information contained in the Annual Reports of some of the States, the report for the year 2017 containing key information of events pertaining to the time period 1st January 2017 to 31st December 2017 has been brought out for the convenience of users. An attempt has been made to present more detailed analysis as compared to previous Reports.

3. The publication is divided into two parts. Part I provides a brief review of the Civil Registration System and contains a summary analysis of data on registered births, deaths, infant deaths and sex ratio at birth at State level. Part II consist of the main tables which provide State and District-wise data on registered births, deaths, infant deaths and still births with rural-urban & sex-wise break-up.

4. The data source for the report is the statutory Annual Statistical Report prepared by the Chief Registrars of Births & Deaths of States/UTs. I take this opportunity to express my sincere gratitude to all the Chief Registrars of Births & Deaths of various States/UTs for their kind co-operation in providing the requisite information.

5. The report has been prepared by the CRS Section of this office. I would like to place on record my appreciation for the efforts put in by all the officers and staff working in the CRS Section of the Office of the Registrar General and the Officers/Staff connected with the Civil Registration system in the States/UTs.

EXECUTIVE SUMMARY

Civil Registration System (CRS) in India is the unified process of continuous, permanent, compulsory and universal recording of the vital events (births, deaths, still births) and characteristics thereof. The Registration of Births and Deaths Act, 1969 (Act No. 18 of 1969) provides for the compulsory registration of births and deaths. Civil Registration records are the best source of Vital Statistics. For the individual, records emanating from CRS provides her/his legal identity and access to the rights of a citizen including entitlements (social benefits provided by the Government). For the country, the requirement of a complete CRS system is a must as it has important administrative and statistical uses. The data generated through a complete and up to date CRS is essential for socio-economic planning and to evaluate the effectiveness of various social sector programs. They also serve as the cornerstone of public health system. The Annual Report on Vital Statistics of India based on Civil Registration System for 2017 has been brought out on the basis of reports provided by the Chief Registrar of Births and Deaths of respective States/Union Territories. The main features of the Annual Report are summarized below:

Birth Registration:

- Based on information received from 29 States/UTs, share of institutional births to total registered births is 83.3 %. (Chart 13)

CHAPTER - I

CIVIL REGISTRATION SYSTEM - AN INTRODUCTION

1.1 The requirement for a complete and up to date Vital Statistical System to yield reliable data on vital events hardly needs any emphasis. These data are essential for socio-economic planning and development and also to evaluate the effective implementation of various public schemes and programs. The main sources of data on vital events in India are Civil Registration System (CRS), Sample Registration System (SRS) and Population Census. Though the Population Census is the main source of information on population and its characteristics; however, being a decennial exercise, it does not provide the measure of changes in population from year to year. The measures of fertility and mortality derived from Census are centered on the midpoint of the decade and as such do not provide yearly change in the population. Of the other two sources of vital statistics for getting the vital rates on a regular basis, the SRS has been designed to provide reliable estimates at National and State level. Robust estimates of vital rates at District level on an annual basis through sample survey are difficult to obtain on account of prohibitively large sample size and variety of resultant factors such as controlling of non-sampling errors etc. CRS is thus the only source for providing vital rates at district level. Rather, a complete CRS can provide these rates at all administrative levels.

1.2 The Civil Registration System (CRS) may be defined as a unified process of continuous, permanent, compulsory and universal recording of the vital events and characteristics thereof, as per legal requirements in the country. In India, the Civil Registration System covers registration of births and deaths. Civil registration system provides the best source of information on the vital rates at all levels. Ensuring cent percent coverage of vital events by registration machinery can help in getting the critical vital statistics, equally important for planning and research. Therefore, emphasis should also be given to the proper monitoring of the activities under the system. Civil registration system is considered to be complete if it covers 90 per cent or more of all births and deaths taking place within a country or area.

1.3 The registration records are primarily useful for their value as legal documents and secondarily as the source of vital statistics. Civil registration as a source of vital statistics is relatively less expensive, as the statistics generated from the registration records are the by-products of an essential administrative process. The registration records can also generate current and continuous statistics, which can be more accurate than any other method of data collection apart from being a continuous source of such data. However, the accuracy of the vital statistics obtained through the registration system depends much on the completeness and promptness with which events are registered and the correctness of the information in the registration records. The improvement in the system of registration of births and deaths is critically dependent on the importance given by the respective States and District administrations to this work and regular monitoring by them. Besides, the level of awareness among the general public about the utility of birth or death certificate is also equally and crucially important.

1.4 Vital statistics obtained through registration records at different administrative levels enable estimation of the size, structure and geographical distribution of the population except for migration. Vital statistics also enables the projections for coming years on the basis of probable trends of fertility and mortality as derived from these vital statistics and their interactions with social, economic and other demographic factors. The vital statistics data generated through an effective Civil Registration System is of immense use for formulation of various development and welfare programmes/ schemes and increases their effectiveness at State and District level. The Civil Registration data acquires paramount importance in the wake of 73rd and 74th amendments to the constitution of India, as it can provide data at local level for micro level planning, monitoring and evaluation of schemes. At national level, the vital

statistics data generated through Civil Registration is also quite useful for medical research and in the study of sex ratio, mortality and morbidity rates and also in the study of causes of deaths.

Registration of births and deaths in India

1.5 In India, the registration of births and deaths is carried out under provisions of the Registration of Births and Deaths (RBD) Act, 1969. The registration is done by the Registrar of the local area, appointed by concerned State/UT Government.

1.6 Provision for registration of births and deaths and the mechanism thereof had been in existence in India for more than a century. Earlier, the work of registration of birth and death was carried out under various laws and byelaws existing at that time in different parts of the country. The need for improvement in the vital statistics system was felt for long and, therefore, after detailed deliberations at various levels, the Registration of Births & Deaths Act, 1969 was enacted providing compulsory registration of births and deaths in India. Since then, this Act has been enforced uniformly across all the States and Union territories (UT). This Act provides for registration of births and deaths and publication of statistical reports annually based on the civil registration data. The enactment of this Act *has* provided a common framework for putting in place an effective system of registration of births and deaths in the country.

1.7 The registration work at various levels in States/UTs is performed by different Departments. The existing organizational set-up involved in the work of civil registration at various levels in different States/ UTs is given at **Annexure-A**. A uni-linear hierarchy exists in 11 States/ UTs where single department is involved at all levels of registration. In 9 States namely Assam, Chandigarh, Haryana, Lakshadweep, Meghalaya, Odisha, Punjab, Sikkim and A&N Islands; Health Department is involved at all levels of registration. Panchayat department in Kerala, and Local Administration Department in Puducherry are responsible for execution of this work at all levels. At present, Health Department supervises the civil registration work at State level in 21 States/ UTs, Department of Planning, Economics & Statistics in 13 States/ UTs, Department of Panchayats in Kerala and Local Administration Department in Puducherry.

1.8 In order to simplify and speed up the process of registration and to bring in uniformity in birth and death registration formats, the registration system was revamped in the year 2000. Under the revamped system, the procedure for registration of births and deaths was also modified to some extent and the forms were redesigned. Most of the tables that are to be part of the Annual Report of the Chief Registrars on registration of births and deaths under revamped system would be based on the information of place of usual residence of mother in case of births and place of usual residence of the deceased in case of deaths. The revamped system became operational in 2000 in all States/Union Territories except Assam, Arunachal Pradesh, Gujarat, Haryana, Himachal Pradesh, Jharkhand, Odisha, Punjab, Uttarakhand and Uttar Pradesh. It was implemented in Assam, Arunachal Pradesh and Odisha in 2001, Haryana in 2002, Himachal Pradesh, Uttarakhand and Uttar Pradesh in 2003, Gujarat and Punjab in 2004 and Jharkhand in 2009.

Statistical Reports

1.9 System of registration of births and deaths is constantly generating statistical information at the local level. The information contained in the reporting forms is consolidated by the Registrar for onward transmission to the Chief Registrar of concerned State/UT. She/he, in turn, is required to submit an Annual Report on the working of the Act and a Statistical Report to the State Government by July and

December respectively of the following year to which the report relates. The Chief Registrars are also required to send a copy of these Reports to the Registrar General, India, Govt. of India.

1.10 Based on the Annual Reports prepared by the States/UTs, the Office of the Registrar General, India, brings out an annual comprehensive report entitled "Vital Statistics of India based on Civil Registration System". These reports have been brought out since 1958 (Before the enactment of Act, only statistical reports were brought out). However, some of the States are not bringing out their Annual Statistical Reports in time, and this in turn, delays the publication of the corresponding national report. It has also been observed that some States also do not include all the prescribed tables in their reports thereby creating a limitation while bringing out the national report. However, notwithstanding all these constraints, this report provides vital indicators including the District-wise registered births and deaths along with infant deaths with sex-wise and rural-urban break-up of registered events for the year 2017.

In most of the States / UTs, IDCC committee is chaired by the Principal Secretary/Secretary of the Department from which the Chief Registrar belongs.

In order to formulate the strategies for further improvements in Civil Registration System and effective implementation of the provisions of the RBD Act in the respective State, it is desire to convene the meeting of such committee at least once in a year. However, about 3.9% of the events are still attended by untrained Mid-wife/Dai and another 3.7% by others.

3.12.2 Chart 14 represents the distribution of medical attention, received by the deceased at the time of death on the basis of data received from 31 States/UTs out of them two States namely Maharashtra and Sikkim have submitted only partial data and therefore their data has not been taken into account while consolidating the data.. While five States namely Bihar, Haryana, Jharkhand, Uttar Pradesh and Uttarakhand have not submitted the data. It is evident from Chart that 34.5% of the total registered deaths have occurred in institutions and is on a higher side than that of other places from where the deceased had received medical attention. About 1.5% of the total registered deaths during 2017 have received medical attention from qualified allopathic professional and practitioner of other system and 33.9% of deceased did not receive any medical attention at the time of death.

3.13 Infant Deaths

3.13.1 The infant deaths registered by place of occurrence (Rural /Urban) of the event for the year 2017 has been given in Statement 17. It may be observed that the share of rural area is only 24.5% while that of urban area is 75.5% in total registered infant deaths during the year. Non registration of infant deaths in rural area is a cause of concern which may be due to non-reporting of infant deaths to the Registrars especially in case of domiciliary events. This figure is exclusive of returns of Jharkhand and Uttarakhand due to non-receipt of information from the State.

Statement 17: Percentage distribution of registered infant deaths by place of occurrence, 2017

Place of Occurrence	No. of Registered Deaths	No. of Registered Infant Deaths	% Share of Registered Infant Deaths by Place of Occurrence	% of Registered Infant Deaths to Total Registered Deaths
Rural	3621270	40583	24.5	1.1
Urban	2842509	124911	75.5	4.4
Total	6463779	165494	100.0	2.6

Statement 18 gives the percentage distribution of sex wise infant deaths which reveals that the share of female deaths in total female deaths is higher than the corresponding male figures.

Statement 18: Percentage distribution of infant deaths by sex, 2017

Sex	No. of Registered Deaths	No. of Registered Infant Deaths	% Share of Registered Infant Deaths to Total registered Deaths
Male	3820702	94023	2.5
Female	2639723	71338	2.7
Person*	6463779	165494	2.6

*: Includes the cases of sex not reported/available, so does not match with the addition of male and female.

3.14 Still Births

3.14.1 The World Health Organisation (WHO) defines a still birth as a baby born with no signs of life at or after 28 weeks' gestation. Still birth, also known as foetal death, has been defined as '*death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy and which is not an induced termination of pregnancy. The death is indicated by the fact that after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.*'

3.14.2 Statement 19 presents still births registered by place of occurrence (Rural /Urban) of the event for the year 2017 and it may be observed that in total registered still births, share of rural registered still births is only 34.4% which may be due to poor netting of still births in rural areas. In urban areas, this share is about 63.0% which may be due to better netting of still births from medical institutions. About 2.6 percent of still births could not be classified due to non-availability of rural-urban breakup. This is based on registered events from 34 States/UTs. The data from two States namely Manipur and Uttarakhand is not available. State/UT-wise registered still births has been depicted in Table 4.

Statement 19: Still Births registered during 2017

Place of Occurrence	No. of Registered Still Births	% Share of Registered Still Births by Place of Occurrence
Rural	54724	34.4
Urban	100156	63.0
Total*	158887	100.0

*Sum of Rural and Urban may not match with Total as some of States have not supplied Rural-Urban breakup.

3.15 Analysis and Findings

Level of Registration (LOR)

3.15.1 The level of registration, defined as the percentage of registered births/deaths to the births/deaths estimated through SRS, determines the performance of a State / Union Territory in registration of births and deaths. In the absence of reliable estimates of number of births and deaths on a year to year basis from any other source, the number of events as revealed from SRS is used to calculate the level of registration. The level of registration so calculated is very high for some of the smaller States/Union Territories either due to the lower estimates of vital events than the actual and due to the fact that SRS estimates of vital events are based on the place of usual residence while events are registered at the place of occurrence irrespective of the place of residence.

3.15.2 The levels of registration of births and deaths for India and States/UTs for the period 2008 to 2017 are shown in Statements 20 and 21 respectively. The level of registration of births has increased to 84.9% in 2017 from 76.4% in 2008 i.e. in last 10 years an increase of about 8.5%. Similarly, the level of registration of deaths has also increased to 79.6% in 2017 from 66.4% in 2008, showing an increase of 13.2% over the last 10 years. Chart 15 depicts the trend in level of registration of births and deaths from 2008 to 2017. Though the level of registration for births has recorded consistent improvement over the years, gap of about 15.1% in case of registration of births and about 20.4% for registration of deaths at all India level remains a cause of concern. It is also pertinent to mention here that the gap between Levels of Birth and Death Registration is narrowing down.

3.15.3 Chart 16 gives the level of registration of births for India and States/UTs for the year 2017. The 12 States/UTs namely Arunachal Pradesh, Assam, Chhattisgarh, Karnataka, Manipur, Meghalaya, Mizoram, Nagaland, Chandigarh, Delhi and Puducherry have recorded cent percent registration of births in 2017.

There are 9 States/UTs where level of Registration is below the India level of 84.9% , of which 4 are major States namely Uttar Pradesh, Madhya Pradesh, Bihar and Jammu & Kashmir.

3.15.4 Statement 20 reveals that the States/UTs continue to function at different levels of registration during 2008-2017.

Bihar & Uttar Pradesh were the only two States which were placed in the 25 to 50 % category in terms of death registration in 2016 while Uttarakhand has joined them in 2017. No State is under the category of less than 25 percent of registration of births & deaths during 2016 as well as 2017. 2 States namely Odisha and Uttarakhand have come to lower level of 80-90 during 2017 in terms of Level of Birth Registration. While in terms of level of Death registration, 1 States namely Andhra Pradesh improved from 80 to 90 % in 2016 to highest category i.e above 90% in 2017. During 2017, Chhattisgarh dropped to 1 category lower of 80 to 90 % from highest category of 90% and above of 2016. While other States have maintained their position in both the years.

3.15.1.9 The level of registration of births and deaths for the year 2017 for India and States/UTs has together been mapped in the Chart 18. The rectangle on the top right corner is the expected target towards achieving the cent percent registration and status of each States is depicted in the Chart 18.

3.16 Sex Ratio at Birth

3.16.1 The Sex Ratio (Number of females per thousand males) at birth is an important indicator to map the sex differential of the population at the beginning of their life. The sex ratio at birth has been calculated after deducting the delayed registration of more than 1 year for the year 2017 and shown in the Statement 23.
